Food Demand Forecaster !

My Profile   Home   Predict   Log out

While the food and beverage industry has to deal with a lot of perishable raw materials, it can be nearly impossible to have the right amount of stock on hand at any given time.

Too much inventory in the warehouse could suggest a high risk of wastage, and not enough means running out of stock which could spur customers to seek solutions from the other competitors.The key problem is finding the balance between scarcity and surplus food.

Food Demand Forecaster will accurately forecast daily and weekly demand, thus reducing the chances of losses in business.
